Timberland Gauges Customer Interest During Holiday Season by Utilizing
Omniture's SiteCatalyst(TM); Analysis Leads to Inventory Optimization and
Product Development Insight.

PR Newswire, pNA

Jan 12, 2004

TEXT:

Omniture, the leader in providing adaptable, next-generation web analytics to large, complex websites, today announced that The Timberland Company, known worldwide as a leader in premium footwear, apparel and gear for the outdoors, is utilizing Omniture's award winning product SiteCatalyst to react to changes in customer interest and gauge online customer demand.

"During our peak holiday season, we were able to watch in real-time the products being queried on our site," said Brian McGovern, eCommerce marketing manager for Timberland. "This was unique because not only were we seeing items being added to the shopping cart, but also seeing items our customers were requesting that were not in stock. We were able to utilize this information and make changes to inventory in response to sudden customer interest."

"The direct channel at Timberland functions as both a store and a primary vehicle for understanding customer interest," continued McGovern. "Therefore we're interested not just in what customers are buying, but in what they are looking for. By coupling the products ordered with browsing patterns we are able to provide feedback to our product development teams and to our wholesale buyers. SiteCatalyst has been an incredibly useful tool as we strive to understand our customer better."

SiteCatalyst is the industry's most mature remotely hosted web-analytics solution. It enables managers and executives throughout an organization to see in real-time all the factors that influence the success of their online businesses. SiteCatalyst provides bottom-line information that measures the effectiveness of websites and marketing initiatives allowing for immediate action on factors that most influence success. The interface is customizable and easy to use giving access to information anytime, anywhere over the Internet. SiteCatalyst is a managed solution that requires no hardware or software to install and can be implemented on average in less than a week.

"Understanding online consumer behavior is an integral part of responding to current interest as well as a valuable leading indicator for future trends. Omniture continues to lead the way in providing this insight so businesses can respond more quickly and increase their online success," said John Mellor, vice president of marketing for Omniture. "Timberland's use of SiteCatalyst data during the critical holiday shopping period is an excellent example of how leading retailers are leveraging their online presence."

For more information about Omniture and SiteCatalyst, please visit our website at <http://www.omniture.com/>.

About Omniture

Omniture, Inc., headquartered in Orem, Utah, is the pioneer of next-generation web analytics technology and is the most experienced provider of adaptable solutions to large, complex websites. Omniture develops and markets SiteCatalyst, which has been designed specifically for the needs of enterprise companies to monitor visitor and commerce activity, identify specific points of change, and drive business decisions that increase ROI.

Lehman EIC 3600 2-3496 KNX 4B68

10/032746

Cutting-edge technology has resulted in an impressive client list, which includes AOL Time Warner, Gannett, Microsoft, Maytag Corporation, Media News Group, VeriSign and Hewlett Packard.

About Timberland

Timberland is a global leader in the design, engineering and marketing of premium-quality footwear, apparel and accessories for consumers who value the outdoors and their time in it. Timberland(R) products are sold worldwide through leading department and specialty stores as well as Timberland(R) retail stores. Timberland's dedication to making quality products is matched by the company's commitment to "doing well and doing good" -- forging powerful partnerships among employees, consumers and service partners to transform the communities in which they live and work.

Journal: Automatic I.D. News vol.8, no.8 p.23

Publication Date: Aug. 1992 Country of Publication: USA

ISSN: 0890-9768

Language: English Document Type: Journal Paper (JP)

Treatment: General, Review (G)

Abstract: Shipment processing is one of many administrative business functions which are needed to process a customer order. From an operational standpoint, customer orders with all pertinent information are created on the main computer system where the customer database usually resides. A form, such as a merchandise picking ticket, is generated and given to the warehouse facility for order fulfilment. The order is then processed for shipment while information on the shipment contents, inventory adjustments, back-order information, shipping and other fee charges must be transferred back to the main computer system to finalize the shipment record and trigger the billing functions. A typical system configuration in which one or more shipment processing stations communicate with a mainframe computer via a network is shown. This system configuration, coupled with automatic ID hardware and procedures, is a solution which automates shipment processing functions and integrates shipment processing data into the billing cycle in real time. Thus, it incurs substantial labor cost savings, eliminates errors and achieves operational efficiency. The automatic ID system is based on bar codes. (0 Refs)

HEADLINE: HUP's emergency department expansion OK'd

BYLINE: John George

DATELINE: Philadelphia; PA; US; Middle Atlantic

BODY:

The Pennsylvania Department of Health has approved the University of Pennsylvania Health System's \$ 10.7 million plan to renovate and expand its emergency department.

When the project is finished by the start of next summer, Penn officials say the Hospital of University of Pennsylvania will have the city's first "paperless" hospital emergency room.

"Everything will operate through computer terminals," said Dr. William. G. Baxt, chairman of Penn's Department of Emergency Medicine. "Everything from patient registration to physician evaluation, nurse evaluation, diagnosis, medication orders and billing will all be done on computers."

Under the current system, a single emergency room patient can easily generate eight pages of documentation, Baxt said. Since the emergency room sees more than 50,000 patients every year, the paperless system will eliminate more than 400,000 pages of patient records annually.

Baxt was involved in setting up the country's first paperless emergency room at the University of California San Diego Medical Center more than two years ago. He joined Penn in July 1994 as its first chairman of the then newly established Department of Emergency Medicine.

In addition to having its own radiology suite, the new emergency department will also feature "on-line product utilization" carts which are linked to computers so whenever a supply item is removed it is automatically reordered and restocked.

"The emergency department will have a very open environment," Baxt said. "The rooms will be very generic; they'll be defined by the type of cart that's brought in. If a suture cart is brought in, it's a laceration room. If an OB cart is brought in, it's an obstetrics room. The goal is to have any room be available for any function at any time."

HUP's project involves renovating 16,200 square feet of existing space and constructing 10,616 square feet of new space. The Silverstein Pavilion lobby will be renovated to provide additional space for the emergency department. The new construction will take place on what is now part of the emergency department's driveway next to the pavilion.

BULK OF THE COSTS

The bulk of the \$ 10.6 million price tag is for construction-related costs, which accounts for more than \$ 7.8 million. The remaining \$ 2.8 million is for equipment and moving costs.

The project will be financed partly from working capital and partly through tax-exempt bonds, according to Sue Canning, business administrator for the emergency department.

HUP's emergency department expansion OK'd Philadelphia Business

The hospital has one of the busiest emergency room's in the city.

Canning said during its last fiscal year more than 60,000 patients entered the hospital's emergency department -- either by foot, by ambulance, or by helicopter.

Almost 60 percent of those patients were true emergency cases, Canning said. The others were a combination of walk-in patients with minor injuries and patients at the department's occupational health unit.

The existing emergency room in the ground floor of the Silverstein Building was built in 1978. The emergency room was designed to have 20 treatment beds, but five additional beds were later added to handle increased patient volume. In 1989, when the hospital established its trauma service program, the emergency room was again reconfigured to create a two-bed trauma bay.

In its application to the state Department of Health, hospital officials cited the lack of sufficient space as the major reason for the expansion project.

"The (emergency room's) inefficient design creates congestion of patient flow, forces the placement of medical supplies in either inconvenient or inappropriate locations, creates unacceptably high noise levels throughout the department caused by crowding of staff into undersized work areas, and precludes sufficient teaching space for the unit," the application states. "Many of the existing treatment rooms are too small to conduct the type of examination required for the emergency nature of most of the patients seen at HUP."

PATIENTS IN CORRIDORS

The application also states the lack of space has forced the hospital to temporarily station patients in corridors, and the single entry point into the emergency room creates patient traffic jams -- both situations that can contribute to security and patient monitoring problems.

The application said the project is also needed to satisfy regulatory agency requirements. The Pennsylvania Trauma Foundation cited the hospital last year for "substandard facilities" associated with a Level 1 Trauma Service program. The citation noted the emergency department has insufficient space around its two trauma beds. The hospital's continued accreditation as a Level 1 trauma center is contingent upon improving the emergency room's existing layout.

The new emergency department will have 36 beds: 20 are multipurpose beds; four are designated for medical resuscitation; two for trauma; one for psychiatric emergencies; and one for eye, ear, nose and throat cases. The remaining eight beds are designated for the department's ambulatory care and occupational health service area.

The faculty, residency and administrative offices will be located next to the emergency treatment areas.
